

A world of services for your hotel

In a connected world, where information search and media consumption methods are constantly evolving, **TEVEO** adapts consumer practices and technologies to a hotel environment. **TEVEO** includes a complete digital offer incorporating IPTV, Chromecast and dynamic display and has already won over several hundred hotels in France and abroad.

The technology that maximises comfort for your guests during their stay

TEVEO has been designed to optimise the in-room TV experience. Thanks to the interface between **TEVEO** and the MSP, your customer is greeted in their own language on arrival and has direct access to their home country's channels. There is also a TV guide covering several thousand channels, where they can search for their favourite programmes, sorted by language, channel type and time period.

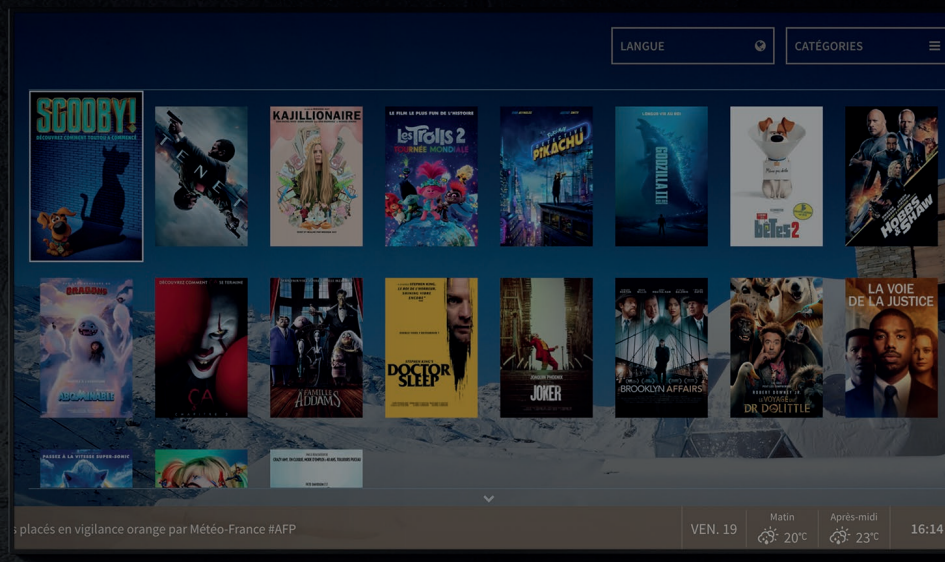

The statistics provided by **TEVEO** enable hotel managers to see which TV channels are most watched by their guests. This helps you optimise your TV package to match the profiles of your international customers.

TEVEO incorporates Chromecast technology so that customers can send streaming content from their smartphone to the TV simply and securely.

As well as the TV shows

that are the mainstay of the streaming platforms, EONA offers you a choice of multilingual VOD catalogues with annual or seasonal subscription options to give your customers the benefit of a cinema experience in their rooms.

A full range of media for successful digital communication

Digital communication has become a real asset for hotel managers, optimising their resources while strengthening the connection with their customers. **TEVEO** brings together an array of tools to facilitate communications between hotel managers and their guests:

Room Directory accessible on smart TVs and customers' tablets and smartphones using a QR code.

Banners to highlight an event or special offer.

Photo/video gallery to promote the hotel's activities and partners.

Messaging service to send information to a customer or group.

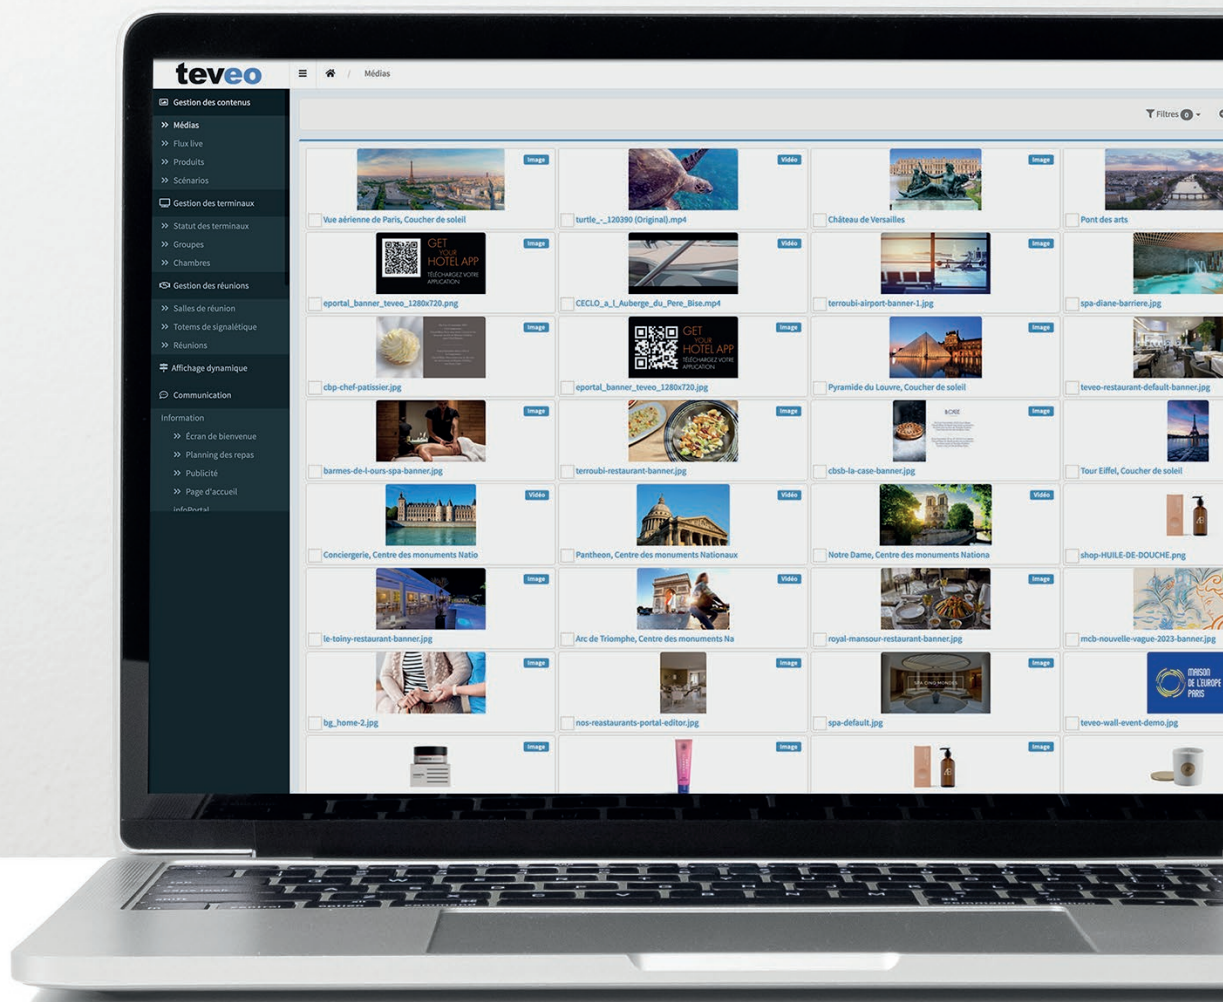

Twitter and RSS feeds to broadcast international news or the hotel's news.

Ordering room service and items from the hotel shop.

TEVEO's web management makes it simple to organise your information

Add your content to the library simply by dragging and dropping it.

Import PDFs, photos and videos (including PowerPoint presentations) and create URL links.

Create scenarios and daily/hourly schedules.

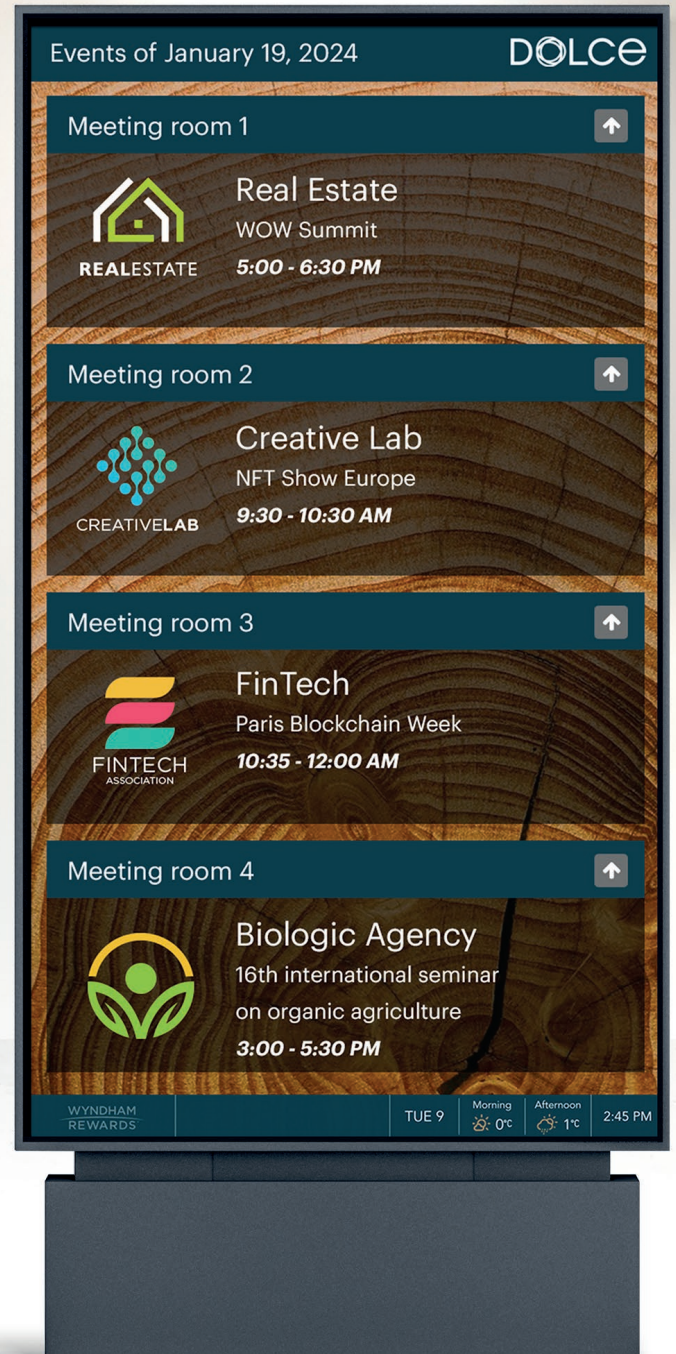

Target specific customer groups (seminars, weddings).

One single solution for every part of the hotel

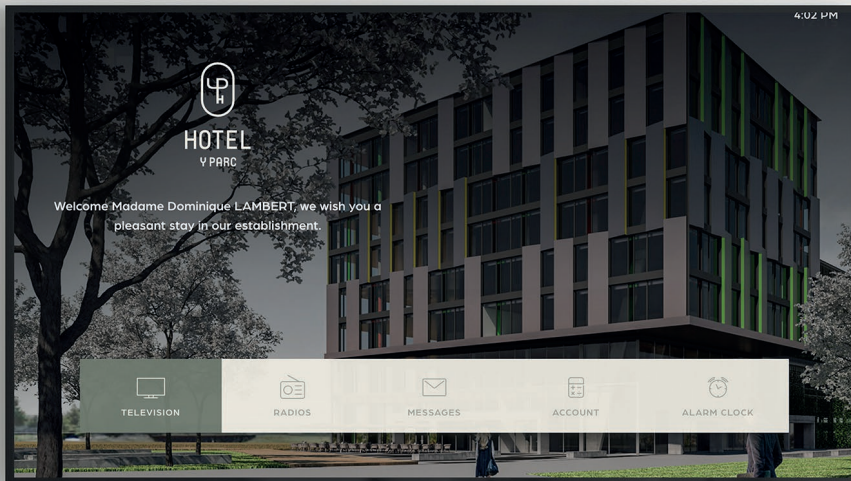

TEVEO offers hotel managers all the following advantages in a single environment:

- A range of entertainment and communications services for guests in their rooms and on their smartphones.
- Dynamic displays in key areas (reception desk, restaurant etc.)
- Meeting room signage (directional totems, meeting room screens).

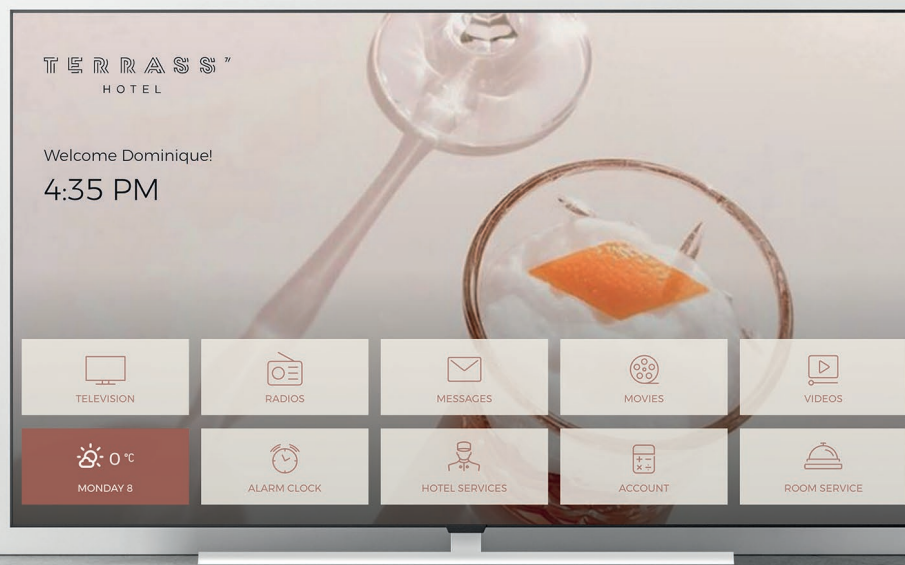

A tailor-made offer to suit every project

TEVEO comes in two versions depending on your hotel category and the level of service you want to provide to your guests.

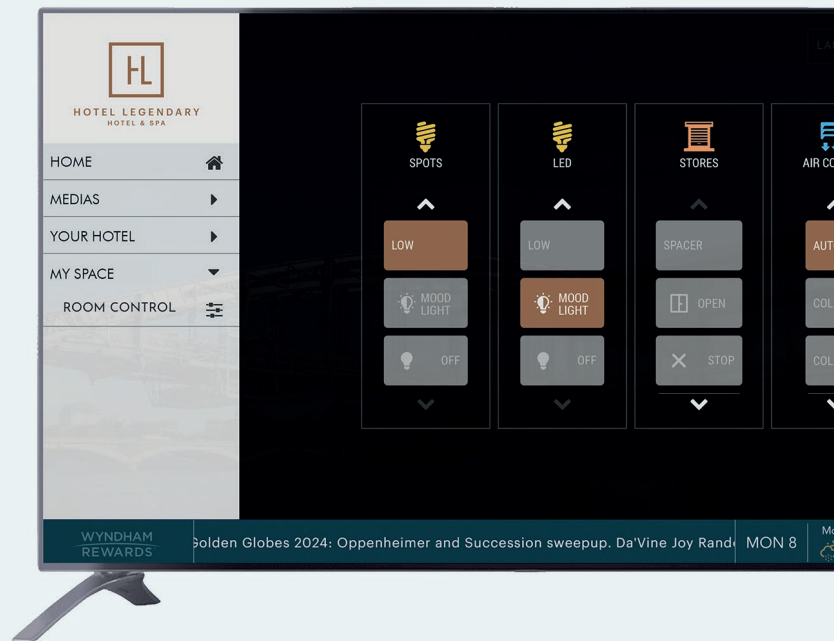

TEVEO One includes a package of services (TV channels, room directory etc.) perfectly suited to the needs of mid-range and small-capacity hotels.

TEVEO Hotel comes with our complete range of services for top of the range hotels.

To meet the needs of each individual hotel, TEVEO can be bundled with:

- Hotel management software, with a large number of interfaces available for the market's leading MSP systems.
- Automation to control the electrical devices in the rooms.
- The alarm system, to activate the TV alarm if the building has to be evacuated.

The TEVEO user interface, which adapts to the medium used (smart TV, tablet, smartphone), can be customised based on your visual identity (logo, colour codes, font).

An architecture to match your environment

TEVEO can be adapted to several types of:

- **Networks:** 100% IP with RJ45, mixed Wi-Fi + Coaxial, IP over coaxial.
- **Terminals:** Smart TV, set-top box, tablet, monitor, smartphone.
- **Servers:** Linux, Windows, VM.

As well as the TEVEO solution, EONA offers:

EOPASS: an IPTV headend solution to receive TV channels and distribute them over IP.

IPVEO: a range of remote controls with improved user-friendliness and design compared to the standard product supplied with the TV. A virtual remote control can also be offered, directly accessible on the customer's smartphone.
